Sample ID	Sample Description	Manure Type (see codes below)								

**200 Swine**  
 201 Dry Sows and Boars  
 202 Sows SEW  
 203 Sows to Weaner  
 204 Sow - farrow to finish  
 205 Weaners  
 206 Finishers

**210 Dairy**  
 211 Milking Cows  
 212 Cows, Heifers, Calves  
 213 Heifers  
 214 Calves  
  
**220 Beef**  
 221 Cow, Calf-grain fed  
 222 Cow, Calf-pastured  
 223 Finishers

**230 Chicken**  
 231 Pullets  
 232 Layers  
 233 Broilers  
 234 Broiler Breeders  
  
**240 Turkey**  
 241 Toms  
 242 Breeders

**250 Sheep**  
 251 Dairy  
 252 Meat  
 253 Wool  
  
**260 Goat**  
 261 Dairy  
 262 Meat

**280 Miscellaneous**  
**281 Geese**  
**282 Duck**

Please make cheque payable to SGS Canada Inc, or contact the laboratory with credit card information.

Please contact the laboratory for pricing information.

## Sampling Instructions for Manure

### Sampling Liquid Manure

For liquid manure, take a sample each time the storage is emptied. Manure applied from a storage emptied in spring will be different from the manure applied from the same storage emptied in late summer.

Agitate the storage completely. With a plastic pail collect samples from various depths of the storage, as it is being emptied. Mix 10 to 20 of these samples thoroughly and transfer a portion to a plastic jar.

The jar should only be two thirds full to avoid gas build-up and explosion.

Seal it tightly and put it in a plastic bag that is securely tied. Store the sample in a cool place until shipping.

### Sampling Solid Manure

For solid manure, take a sample every time the storage is emptied until a trend becomes evident. Then you can sample every few years or when you make a major change in manure source or in management. These can include changes to ration, bedding, or storage methods.

Solid manure is more difficult to sample randomly. On clean cement or plywood, take samples (a forkful) of manure from various loads leaving the pile or from various parts of the pile. Chop the manure with a shovel or fork and mix the samples together as thoroughly as possible.

Divide the manure in to 4 portions and discard 3. Continue mixing and dividing the manure until you can fill a plastic jar or shipping container that can contain about 500g.

Place the tightly covered sample in a plastic bag and store in a cool place until shipping.

### Sample Suggestions

- Please make sure that manure samples are shipped earlier in the week so that they reach the lab before the weekend.
- If plastic jars with screw caps are needed, please call the lab and we will be happy to supply them.
- Please do not use glass jars or margarine containers as the jars can explode or the lids tend to pop off in transit.
- Please enclose the submission form in its own **separate bag** to prevent damage to the information on the form in case of a leak.

### Sample sizes:

Liquid – 500mL

Dry – 500 grams

These sampling instructions can be found in the Soil Fertility Handbook Publication 611 issued by the Ministry of Agriculture, Food and Rural Affairs and The Fertilizer Institute of Ontario Inc.
